

RPC Engineering Release Process

Last Updated: 09/15/2014

TAGGING INFORMATION

- The release manager creates version tags.
- Naming convention: <major release version>.<minor release version>.<revision version><release candidate version>
- A tagged version will be released at least once a month. Major releases will correspond with OpenStack major releases. Monthly and as-needed releases will be tagged as a minor or revision releases based on the changes included.

BRANCHING

- The release manager creates release branches.
- Stable branches correspond with OpenStack major releases. Proposed branches correspond with an initial, dev complete RPC release.

GATING

- All commits will be gated.
- Commits on the master branch will be gated against master.
- Commits on the proposed branch will be gated manually by the QE team.
- Commits on the stable branch will be gated against stable.
